

Silver Falls Capital Acquires Agriair, LLC.

WOODINVILLE, WASHINGTON – April 3, 2019. Silver Falls Capital announced today that it has acquired privately held Agriair, LLC based in Mukilteo, WA. Agriair designs, manufactures and distributes a range of industrial grade Ionized Hydro Peroxide systems that ensure air quality and sanitation in demanding, indoor agriculture facilities.

Agriair's equipment prevents high value crop loss caused by the harmful effects of mold, spores, volatile organic compounds and surface contaminants prevalent in indoor agriculture facilities. They help customers meet compliance requirements for air quality, food and product safety and a healthy work environment at these facilities.

"This is a really fast-growing market and we are excited to help customers successfully cultivate valuable crops grown in vertical farming, hydroponics and traditional indoor grow facilities. Demand is increasing for crops requiring a high grade of purity and safety and so are regulations. Agriair is well positioned to provide air quality solutions in these environments." said Paul de la Port, the company's new Vice President and a Co-Founder, Partner at Silver Falls Capital.

The company will continue to manufacture products out of its facility in Mukilteo WA and continue to be supported by a global network of distributors. For all customers and vendors, there will be no changes in day to day operations and they should expect "business as usual".
